

HLLogSearch (v1.0)

1. Search Half-Life server logs.

The plugin allows to search Half-Life server logs, featuring simple search, case insensitive search, regular expression search and limiting the date range of searched files. For this to work the log files must be in a directory accessible by the bot.

2. Configuration

The configuration file for this plugin is **system/FeedReader/HLLogSearchConfig.xml**

2.1. authLevel

The min. auth level to use this plugin.

```
<authLevel>ADMIN</authLevel>
```

2.2. commandLogs

Command to search the logs.

```
<commandLogs>!logs</commandLogs>
```

2.3. logDir

Directory containing the logfiles.

```
<logDir>/usr/local/hlds/logs</logDir>
```

2.4. maxResults

Max no. of search results sent back.

```
<maxResults>15</maxResults>
```

3. Commands
