

# Project-Info

PPF is a Java IRC bot. It uses a plugin system to add functionality.

It is written in Java, so you will need to make sure that you have the Java JRE 1.5 or higher available from <http://www.java.com> or take the PPF download that includes Java. Being written in Java, it means that you can easily run the bot on a windows or a linux machine, or any machine with an operating system that has a JVM available for it. There are some clear instructions for Installing Java courtesy of [www.jibble.org](http://www.jibble.org)

Main features:

- Basic bot
- Lots of plugins already available
- 3 built in auth levels
- Loading new plugins while running
- Reloading of plugins while running
- Unloading plugins while running
- Internationalisation
- GUI for editing the config
